

Orbnet Education Bundle for XProtect

Unified security and incident response for schools — built on Milestone XProtect

Orbnet Education Bundle for XProtect brings access, alarms, and video into one joined-up operating model — so schools can see what's happening, respond faster, and share the right video when it matters.

Orbnet Education Bundle is designed for schools and trusts that want a consistent way to manage security and incidents. Built on Milestone XProtect®, it connects access

control, alarm events and video into a single workflow that supports both day to day operations and serious incidents — without being locked into one access or alarm system.

Who it is for

- Single-site schools wanting a stronger front-door and after-hours response model.
- Secondary schools and colleges that need controlled sharing of live or recorded video during incidents.
- Multi-academy trusts that want one operating model with site-by-site product choice.

What it solves

- Door alarms, unauthorised access attempts, and held-open or forced-open situations.
- Intrusion events requiring immediate visual verification before escalation.
- Incidents where the right video needs to be shared quickly with trust-level and external responders.
- Operational sprawl caused by mixed access, alarm, and video tools across an estate.
- Delays in recovering incident data and video

Built for school teams

Choice where it matters

Schools can select the access control platform that fits each site while keeping one consistent operating model.

Clear alarm awareness

Alarm events appear alongside video in the same workflow, helping staff understand what's happening before escalating.

Controlled emergency video sharing

Relevant live or recorded video can be shared safely with authorised external parties — without opening the full system.

Ease of use

Designed for use by reception, estates, safeguarding, leadership, and trust level operations.

Designed for Education

Orbnet Education Bundle for XProtect includes ORBNET Access Control, Alarm response, and controlled emergency video sharing in XProtect. By implementing the bundle you can focus on safeguarding, site security, and operational response rather than on unnecessary system sprawl.

ORBNET Access Control

Connects school doors and access activity to video in XProtect, so staff can quickly verify what's happening and respond with confidence.

- Supports leading access platforms
- Links doors with nearby cameras
- Brings access events into one operating view

ORBNET Alarm Integration

Brings alarm activity into the same operating view as video — helping school staff understand what's happening before they respond.

- Shows intrusion and panic events alongside relevant cameras
- Helps staff quickly judge whether an alarm is accidental or needs escalation
- Supports existing alarm panels without forcing a full system change
- Fits both in hours and after hours response workflows

ORBNET Streaming Engine

Allows schools to share the right video with the right people during an incident — without opening up the full video system.

- Securely share live or recorded video with authorised external responders
- Support safeguarding and serious incident response without added complexity
- Maintain control over who sees what, and when
- Keep video sharing appropriate, auditable, and incident led

Selection path

Choose the access layer per site, match the alarm layer to the panel estate, and standardise outward emergency video sharing through ORBNET Streaming Engine in XProtect.
